Synonymy: Verbena mexicana trachelii folio fructu aparines Dill., Hort. Elth. 407--408, pl. 302, fig. 389. 1732. Verbena mexicana L., Sp. Pl. ed. 1, 19. 1753. Blairia mexicana (L.) Gaertn., Fruct. & Sem. Pl. 1: 265, pl. 56, fig. 1. 1788. Zapania mexicana (L.) Lam., Tabl. Encycl. Méth. Bot. 1: 59. 1791. Blairia cordifolia Moench, Meth. 423. 1794. Priva hispida A. L. Juss., Ann. Mus. Hist. Nat. Paris 7: 70. 1806. Zappania hispida Zuccagni in Roem., Collect. 118. 1809. Verbena cordifolia Bourgeau ex Moldenke, Prelim. Alph. List Invalid Names 45, in syn. 1940. Verbena mexica Sessé & Moc. ex Moldenke, Suppl. List Invalid Names 9, in syn. 1941.

The type of Verbena mexicana L., on which this species is based, is a specimen in Dillenius' Hortus Elthamensis presently preserved at Oxford University, England, since Linnaeus plainly bases his name on the Verbena mexicana trachelii folio fructu aparines of Dill., Elth. 407, pl. 302, fig. 389. In the Linnean Herbarium, London, specimen number 4, under genus 35, Verbena, is labeled "mexicana" in Linnaeus' own handwriting and is what we now call Priva mexicana. This specimen has by many been regarded as the type of the species and is, in fact, so cited in the present notes. In the Naturhistoriska Riksmuseum, Stockholm,

are presently preserved two more specimens from Linnaeus' herbarium and apparently collected by him from cultivated material in Sweden -- probably from his own garden at Uppsala. The first sheet has on its front in ink on the top of the sheet "(*VERBENA mexicana Linn.*)" and in pencil near the bottom "*Verbena 5 mexicana L. sp. pl. 19 = Priva mexicana Pers. (syn. P. hispida Juss.)*" and in ink at the bottom, in an unknown hand, "*Priva mexicana Pers.*" On its reverse side one finds in pencil "*Linné herb.*" and in ink (unknown hand) "*Verbena diandra, spicis laxis, calycibus fructus reflexis rotundato-didymis hispidis.* Linn. Spec. plant. 19.5." and in ink in another hand "*Priva hispida Juss.*" and in ink in still another hand "*Priva mexicana Pers.*" and, finally, in ink in what is probably Linnaeus' own handwriting "*Hort.*" The second sheet has on its front face in Linnaeus' own hand "*H. U.*" and "*5*" and in ink in another apparently old hand "*Mexicana*" and in ink in a later handwriting "*Priva hispida Juss.*" On the back side one finds in pencil "*Linné herb.*" and in ink "*Herb. Alstroemerii*" and "*Priva*" and in ink in an older hand "*(Verbena mexicana)*" and in ink in Dahl's handwriting "*a Linné f.*"

The Herb. A. L. Jussieu 5094, cited below, is the type collection of *Priva hispida*.

Priva mexicana has been collected in milpas, moist canyon bottoms, dense wooded waterways, shaded ravines, wooded mountain ravines, and wooded quebradas, on hills, mountainsides, open mountainsides, rocky mountainsides, and lava fields. Gentry describes it as a plant of the canyons of the Transition and Upper Sonoran life-zones. Stanford, Retherford, & Northcraft found it on valley floors interspersed with arroyos and alluvial fans and sparsely covered with *Yucca* and *Larrea*. Mueller & Mueller say it is abundant in dense woods. Barkley and his associates found it in rich moist soil of open woodlands, xeric sunny lava and moist rich shady pockets on the pedregal, and in scrubland on limestone mountainside. Standley describes it as an erect or suberect herb 2 to 3 feet tall, growing as a weed in cafetals or in pine forests. Pringle says it grows 3 to 4 feet tall. Lundell calls it "Perennial", while Gentry describes it as 1 to 2 meters tall, with thick hollow stems. Its flowers are described variously as white, pink, lavender, pinkish-lavender, or white with purple on the inside of the upper lip.

The species has been collected at altitudes of 1500 to 2460 meters and 4300 to 8000 feet, in flower in July, August, and September, and in fruit in those same months and also in December. It is often mis-identified as *P. lappulacea* (L.) Pers. or *P. aspera* H.B.K., while the Lejeune specimen cited below was identified by someone as *Drepania mexicana* Pers.

The Wilkinson specimen cited below is not typical. The Stanford, Retherford, & Northcraft 188 collection, also cited below, was probably collected in Zacatecas, although the label states "15 kilo west of Concepcion del Oro on the Coahuila-Zacatecas border."

PRIVA MEYERI Jaub. & Spach

Literature: E. Mey., Comm. Pl. Afr. Austr. 275. 1837; Jaub. & Spach, Ill. Pl. Orient. 5: [57]. 1853--1856; Moldenke in Fedde, Report, 41: 17--19. 1936; Moldenke, Prelim. Alph. List Invalid Names 38. 1940; Moldenke, Alph. List Invalid Names 39. 1942.

Synonymy: Priva forskaelii E. Mey., Comm. Pl. Afr. Austr. 275, as to specimens cited. 1837.

The species is said by Sutton to grow 12 inches tall, with white flowers, and to be "rare"; Busse reports the flowers white to light-violet; Galpin says the flowers are white and the plant grows in scrub on banks. It has been collected at altitudes of 2800--4800 feet, blooming and fruiting from October to January and in April. It has been distributed in herbaria under the names Priva dentata Juss. and P. forskaelii E. Mey. The Drège 4728 specimen at Berlin is from Meyer's own herbarium and is inscribed by him "Priva Forskålæi mihi". The Bachmann 1152 collection exhibits characters varying toward P. cordifolia var. abyssinica and is inscribed "Blüthen unscheinbar weiss und rothviolett". The Tyson collection from Kowie has rather large spine-like warts arranged in two parallel rows on its cocci.

PRIVA MEYERI var. MADAGASCARIENSIS Moldenke

Literature: Moldenke, Phytologia 3: 276 & 294. 1950.

The varietiy is said to have lilac flowers and has been collected on gneiss rocks at an altitude of 700--1200 meters, blooming and fruiting in November.

PRIVA PEDICELLATA Moldenke

Literature: Moldenke, List Geogr. Distrib. 32. 1939; Phytologia 1: 429--430. 1940; Moldenke, Known Geogr. Distrib. Verbenac. 129 & 195. 1949.

Additional citations: BURMA: A. E. English s.n. (Ed--type, N--fragment of type, N--photo of type, Z--photo of type).

The collector notes that this plant "Differs from type in the long pedicels. The true P. leptostachya collected by Collett (no. 851) at Meiktila."

PRIVA PERUVIANA Moldenke

Literature: Moldenke in Fedde, Repert. 41: 23--24. 1936; Moldenke, Known Geogr. Distrib. Verbenac., ed. 1, 35 & 99. 1942, ed. 2, 73 & 195. 1949.

Additional citations: PERU: Amazonas: A. Mathews 3158 (P--isotype). Cajamarca: Raimondi 396 (B).

PRIVA SOCOTRANA Moldenke

Literature: Bayley Balfour, Trans. Roy. Soc. Edinb. 31: 232--233. 1888; Moldenke in Fedde, Repert. 41: 38--39. 1936; Moldenke, Known Geogr. Distrib. Verbenac., ed. 1, 53 & 99 (1942), ed. 2, 124 & 195. 1949.

My friend, W. T. Stearn, has kindly called my attention to the fact that the type collection of this species is cited by Balfour under "Priva leptostachya Juss." in his "Botany of Socotra" in the reference cited above, where he makes interesting comments on what he regards as variation in this genus. It is his opinion that the fruit characters used by authors are not sufficiently constant to warrant taxonomic recognition.
